

## Getting to know your loom:

Look at the 2 pieces, and you will see one board has pegs, the ones with the inverted u shape; the other board has pins, or rods.

The pins and pegs are not on the center of the boards.

By assembling the boards facing a different way we will obtain 3 basic gauges.

If we assemble it, with the 2 sides with the smallest edges facing each other, we obtain gauge 1:

This gauge works great with light weight yarns.

By assembling one small edge, facing one big edge we obtain the second setting:

Gauge 2 works good with medium weight yarn, like Red Heart medium.

By assembling the 2 boards with the biggest edges facing each other we get gauge 3:

This gauge is the one for bulky yarns, or 2 strand of worsted yarn, held together.

Adding washers between the 2 boards, on any one of the settings, will give another gauge.

So, get your yarn, play around and find the gauge that suits your needs.
